LEARN MORE ABOUT

CAREERS IN PHARMACY

**VIRTUAL INFORMATION SESSION FOR
HIGH SCHOOL COUNSELORS**

A PHARMACIST'S ROLE

Pharmacists play a vital role in helping patients get the best results from their medications. They work with other health care professionals to enhance patient care and promote wellness. Pharmacists use critical thinking skills to ensure medications and dosages are correct, prevent harmful drug interactions, counsel patients on the appropriate use of their medications, and coordinate support from other medical professionals through direct and indirect patient care roles.
