

## Description of subjects/entities on each worksheet in the Menagerie\_Kennel Excel workbook

- **Animal\_Types:** the list of animal types for which the Menagerie Kennel provides services
- **Appointment\_Status:** the list of options provided for each appointment
- **Appointments:** the list of appointments which have occurred
- **AppServs:** this will be referred to as a 'junction table' once it is imported into the Menagerie\_Kennel database. There is a many-to-many relationship between the Appointments data and the Services data.
  - Many appointments can provide many services.
  - Many services can be provided at many appointments.

To deal with a many-to-many relationship in Access, it is best to create a junction table. This will be discussed further during the steps for importing from Excel to Access and setting up the relationships between the tables in the database.

- **Employees:** the list of individuals employed by the Menagerie Kennel
- **Owners:** the list of pet owners who have received services from the Menagerie Kennel
- **Payment details:** the list of charges and payments for services
- **Pets:** the list of all pets that have received services at the Menagerie Kennel
- **Services:** the list of services provided by the Menagerie Kennel
- **Vet Offices:** the list of veterinary offices that employ veterinarians who provide services to pets who also receive services at the Menagerie Kennel
- **Vets:** the list of veterinarians who provide services to pets who also receive services at the Menagerie Kennel
